If your vehicle breaks down

Read it once. Keep it in the glovebox.

1. **Get to safety**
   Steer off the road as far as you safely can. Hazard lights on. Avoid bends and hilltops.

2. **Be visible**
   If it is safe, place the warning triangle well behind the vehicle. Use every light at night.

3. **People first**
   Passengers out on the side away from traffic, waiting well clear of the road. Never stand between the vehicle and traffic.

4. **Call for help**
   Say where you are, which way you were heading, the vehicle, what happened and how many people are with you.

5. **No risky repairs**
   Do not change a wheel or lift the bonnet beside a busy road. If in doubt, wait for help.

6. **Stay safe**
   At night keep everyone together. If you are alone and feel unsafe, stay inside, doors locked, and call for help.

7. **Afterwards**
   Have the fault properly diagnosed and fixed, and note what happened in the vehicle's record.
